

WHAT KIND OF TETHER DO I NEED?

CHOOSE THE RIGHT SOLUTION FOR YOUR TOOLS.

CAPTIVE HOLES

Holes that are preformed into the body of the tool.

Shackles
Omni Anchors
Maillons
Karabiners

CAPTIVE HANDLES

Handles that form a natural closed loop in the structure of the tool.

Triple-Lock Tethers
Choke-On Anchors
Wire Anchors

OPEN-ENDED HANDLES

Handles that are open at one end and have no built-in holes or loops.

Universal Anchors
Tools Chucks

MOULDED GRIP HANDLES

Open-ended handles commonly featured on small gripped hand tools.

Universal Anchors

ROTATING TOOLS

Tools that require a 360° rotation from the user in order to function.

Tool Chucks

SHAPED TOOLS

Tools that are preformed with a tapered mid-section.

Shackles

WAISTED TOOLS

Tools that have a built-in 'waist'; a thin section between two thicker sections.

Triple-Locks Tethers
Drill Battery Shoes

INSULATED TOOLS

Non-conductive tools used for electrical installation and maintenance work.

Universal Anchors
